# Errata and Corrigenda

The publishers and the authors would like to make the following corrections:

---

Krstenansky, J.L., Owen, T.J., Yates, M.T. and Mao, S.J.T., The C-terminal binding domain of hirullin P18: antithrombin activity and comparison to hirudin peptides (1990) FEBS Letters 269, 425–429.

The sequence of hirullin P18 shown in Figure 1 omits a Gly residue at position 30. As a consequence the numbering of all of the peptides described in the paper is off by one in number. For example in the abstract 'acetyl-hirullin $P18_{40-61}$' should be 'acetyl-hirullin $P18_{41-62}$'. In Table I compounds 1-5 are Ac-hirullin $P18_{41-62}$, hirullin $P18_{50-62}$, hirullin $P18_{51-62}$, hirullin $P18_{52-62}$ and hirullin $P18_{53-62}$, respectively. The authors apologize for any difficulties or confusion that this may cause.

---

Bianchi, A., Quistorff, B. and Witters, L.A., Hepatic zonation of insulin-stimulated tyrosine phosphorylation (1990) FEBS Letters 269, 435–439.

The legend of figure 1, lines 3 and 4 should read: ....'Initial eluate, pellet and cytosolic proteins from perivenous (*even numbered lanes*) and periportal (*odd numbered lanes*) were separated on a 12%....'.

---

The authors would like to make the following correction and addition to their article:
Fisher, K.J., Tollersrud, O.K. and Aronson, Jr. N.N., Cloning and sequence analysis of a cDNA for human glycosylasparaginase. A single gene encodes the subunits of this lysosomal amidase (1990) FEBS Letters 269, 440–444.

Fig. 5 on p. 443, in line two of the sequences ending with amino acid number 31 and nucleotide 120, amino acid number 25('C') should be an 'S' and nucleotide number 100('T') in the codon which corresponds to this amino acid being corrected, should be an 'A'. Therefore, the sequences in this region with the corrections in bold lettering should be:

```
...S   S   P...
...TCC AGC CCT...
```

In addition, the correct sequences for glycosylasparaginase have been reported to EMBL data bank and have the accession number X55762.

---

Ohkawa, K., Takada, K., Takizawa, N., Hatano, T., Tsukada, Y. and Matsuda, M., Clear cell carcinoma of the human ovary synthesizes and secretes a transferrin with microheterogeneity of lectin affinity (1990) FEBS Letters 270, 19–23.

Figures 2 and 3 have been incorrectly placed and should be interchanged, without relocating the legends.
